## SUMMARY

Analytical and detail-oriented **Data Analyst** with 1.5+ year of experience in **Python-based application development**, **data analytics**, and **automation tools**. Skilled in developing scalable, data-driven solutions to optimize workflows and support business decision-making. Adept at **integrating AI/ML models**, designing **efficient data pipelines**, and delivering **interactive dashboards** for real-time reporting. Strong foundation in **software architecture**, **object-oriented programming**, and **data visualization**. Passionate about building intelligent tools that enhance efficiency, governance, and risk management processes.

## EDUCATION

|                                                                                                  |                                               |
|--------------------------------------------------------------------------------------------------|-----------------------------------------------|
| <b>Lakshmi Narain College of Technology</b><br>B.Tech in Computer Science Engineering, CGPA: 8.0 | Indore, India<br><b>July 2020 – June 2024</b> |
| <b>M.P Public School</b><br>Senior Secondary (PCM), Percentage: 76.6%                            | Indore, India<br><b>July 2019 - July 2020</b> |
| <b>St. Raphael Co-Ed School</b><br>Higher Secondary , CGPA: 7.2                                  | Bhopal, India<br><b>July 2017 - July 2018</b> |

## SKILLS SUMMARY

- Languages: Python, SQL, C++, HTML, MQL4, MQL5, Pine Script
- Data Analytics: Pandas, NumPy, Matplotlib, Statistics, Power BI, Excel, Streamlit
- Databases: MYSQL , MongoDB , SQL
- Data Engineering Tools: FastAPI, REST API Integration, GitHub, Postman, Jupyter Notebook, VS Code PyCharm
- Platforms /Trading Tools: MT4, MT5, TradingView
- Operating Systems: Windows 11 , Linux
- Core Concepts: Data Analysis, Data Cleaning, ETL Pipelines, Data Visualization, Dashboarding, Statistical Analysis, Data Structures & Algorithms, Root Cause Analysis, Problem Solving

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                             |

## PROJECTS/OPEN-SOURCE

### Options Backtesting & Market Data Analytics System | Python, SQL, Pandas, NumPy, MongoDB, FastAPI

- Processed and analyzed multi-year tick-by-tick stock market datasets containing millions of records.
- Built a scalable data analytics engine to generate 5-second candle data from raw market ticks.
- Developed SQL-based analytical queries for trade analysis, profit/loss tracking, drawdown analysis, and strategy comparison.
- Designed ETL pipelines for cleaning, transforming, and storing high-frequency trading data.
- Implemented multiprocessing and asynchronous workflows for faster backtesting and large-scale analytics processing.
- Built APIs for strategy execution, report generation, and performance analytics.

### Sales & Business Performance Dashboard | Python, SQL, Power BI, Excel

- Developed an interactive business dashboard to analyze sales, revenue growth, customer retention, and regional performance.
- Performed data cleaning, preprocessing, and transformation using Python and SQL.
- Created KPI reports and visual analytics dashboards using Power BI.
- Automated reporting workflows to reduce manual reporting efforts and improve business monitoring efficiency.

### Trending Sector Detector | Python, Pandas, MongoDB, Numpy, Streamlit

- Built a machine learning-based analytics system to identify sector-wise market trends and breakout opportunities using 10 years of historical stock data.
- Performed large-scale data preprocessing and statistical analysis for trend identification.
- Developed a Streamlit dashboard for real-time visualization and analytical reporting.
- Automated daily data ingestion and updates using cron jobs and optimized backend data handling using MongoDB.

### TradeStreet Platform | Python, MongoDB, MQL4/5, Pandas

- Built and optimized a **scalable trading solution** for managing **bulk market data** and integrating multiple trading strategies for clients.
- Designed and implemented **MongoDB aggregation pipelines** to efficiently process large volumes of trading and CRM data, improving data query performance and scalability.
- Developed **pattern detection modules** to automatically identify and analyze recent market patterns, helping traders make more informed decisions.
- Created **custom indexes** to monitor the performance and growth of different sectors and trading strategies within the platform.
- Engineered robust pipelines to preprocess, clean, and store live and historical trading data for seamless strategy backtesting and real-time execution.
- Worked with **MQL4/5** to develop and deploy algorithmic strategies on **MT4/MT5**, integrating the backend data handling system with trading terminals.

---

## ACHIEVEMENTS

- Awarded with **Employee of The Year** in July 2025.
- Developed scalable analytics systems handling large-scale financial datasets and real-time reporting workflows.

---

## CERTIFICATES

- C++ certification from Bluechip Institute
- Business Analytics Foundations — Coursera Certified
- Data Analyst Certification of Trainee Data Scientist From Bitsquad
